ABSTRACT

This report presents detailed tabulations of data on the residence and migration of first-time freshmen enrolled in degree-granting institutions in the Fall of 1996 based on data from the Integrated Postsecondary Education Data System's Fall Enrollment survey. Tables are presented by state, control (public/private), and level of institution, for all first-time freshmen and, separately, for first-time freshmen who had graduated from high school in the previous 12 months. Of the 2.2 million first-time freshmen, almost 17.1 percent migrated between states: that is, they enrolled in a degree-granting postsecondary institution in a state different from the student's state of residence. Out-migration rates varied considerably from a low of 6.4 percent in California to a high of 55.2 percent in the District of Columbia. In-migration accounted for 85 percent of the District of Columbia's total enrollment of first-time freshmen and in New Hampshire, Rhode Island, and Vermont over half their first-time freshmen were from out of state. First-time freshmen who had graduated in the previous 12 months comprised about 70 percent of all freshmen. Overall, the migration patterns of first-time freshmen were found to be relatively stable since 1992. Other data showed that almost 23 percent of first-time freshmen were enrolled in private colleges. Appended are technical data on the survey and student migration data for nonprofit institutions. The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

Highlights

This report presents detailed tabulations of data on the residence and migration of first-time freshmen enrolled in degree-granting institutions in the fall of 1996. The data are from the residency portion of the "Fall Enrollment" survey, part of the Integrated Postsecondary Education Data System (IPEDS) of the National Center for Education Statistics (NCES)[1]. IPEDS provides comprehensive and consistent data for all postsecondary institutions in the United States and outlying areas, including those institutions that grant an associate's or higher degree.

The 1996 IPEDS Fall Enrollment survey collected information on the number of students enrolled in postsecondary institutions by student level, enrollment status (full- or part-time), race/ethnicity and gender. It also collected enrollment by state of residence[2] for all first-time freshmen including those first-time freshmen who had graduated from high school in the 12 months preceding the fall of 1996. Residence data are reported for all 4-year degree-granting institutions and 2-year degree-granting higher education institutions[3] that were eligible to participate in Title IV federal financial aid programs in the 1996-97 academic year.

Previous reports of the residence and migration of first time college students were limited to those institutions that were accredited at the college level by an agency recognized by the Secretary of Education, whether or not they granted a degree. The Department of Education no longer recognizes a distinction between Title IV eligible postsecondary institutions that are accredited at the college level and those that have vocational accreditation. As a result, for the 1996 IPEDS surveys there was no current universe of 'higher education' institutions as defined by accreditation status.

The tables in this report are presented by state, by control (public and private) and level of institution, for all first-time freshmen and separately for first-time freshmen who graduated from high school in the 12 months prior to the fall of 1996. Additional data for private nonprofit institutions are provided in appendix B.

The IPEDS residence report for the fall of 1996 accounted for 2.22 million first-time freshmen. Almost 380,000 of these freshmen (17.1 percent of all enrolled first-time freshmen) migrated

---

[1]Additional data from the fall enrollment part of the survey will also be published and made available to interested readers; see U. S. Department of Education, National Center for Education Statistics, *Enrollment in Degree-Granting Institutions: Fall 1996.*

[2]State of residence is the state identified by the student as his/her permanent address at the time of application to the institution. This may be the legal residence of a parent or guardian, or the state in which a student has a driver's license or is registered to vote. It is not necessarily the state in which the student's high school is located.

[3]Higher education institutions are those accredited at the collegiate level by an agency recognized by the Secretary, U.S. Department of Education for the 1995-1996 academic year.

between states; that is, they enrolled in a degree-granting postsecondary institution that was in a state different from the student's state of residence (table 1).

The percent of first-time freshmen who left their state to attend college varied considerably by state, ranging from a low of 6.4 percent in California to a high of 55.2 percent in the District of Columbia (figure 2 and table 3). Additional states that had 10 percent or less of their freshmen leaving the state included Alabama (8.7 percent), Arizona (9.2 percent), Iowa (9.9 percent), Kansas (10.0 percent), Michigan (9.2 percent), Mississippi (7.0 percent), North Carolina (8.4 percent), Oklahoma (10.0 percent), Texas (8.1 percent), Utah (6.5 percent), and Washington (7.0 percent). In addition to the District of Columbia, states that had 30 percent or more of their first-time freshmen leave the state to attend college included Alaska (50.3 percent), Connecticut (44.3 percent), Maine (38.7 percent), Maryland (30 percent), New Hampshire (42.4 percent), New Jersey (37.1 percent), Rhode Island (32.8 percent), South Dakota (30.1 percent) and Vermont (43.9 percent).

Several states had sufficiently large numbers of freshmen students migrating into their state to attend college to significantly affect the state's total enrollment of first-time freshmen. For example, in-migrants comprised 85 percent of the District of Columbia's total enrollment of first-time freshmen; in New Hampshire, Rhode Island and Vermont over half their classes of first-time freshmen were from out of state; and in Connecticut, Delaware, Massachusetts, Nevada, and North Dakota, between 30 and 49 percent of the state's enrollment of first-time freshmen were from a different state (figure 1 and table 3).

First-time freshmen who had graduated from high school in the 12 months prior to the fall of 1996 comprised only about 70 percent of the total class of first-time freshmen. This varied by state of residence, ranging from a low of 38 percent in Washington to a high of 81 percent in North Dakota and Virginia (derived from tables 1 and 2). It also varied by the level of institution. Among 4-year institutions, the percentage of all first-time freshmen who were recent high school graduates ranged from a high of 94 percent in Iowa to a low of 73 percent in Utah (figure 3). Among 2-year institutions, the percentage ranged from a high of 70 percent in North Dakota to a low of 24 percent in Washington state (figure 4). The migration of recent high school graduates out of their states of residence to attend college resembled the migration of all first-time freshmen.

A slightly higher percentage of recent high school graduates than all first-time freshmen (20 vs. 17 percent, tables 1 and 2) left their home state to attend college. The percent of enrollment of recent high school graduates due to in-migration was generally higher in states that had a high percentage of freshmen in-migrants (table 3). Similarly, in states that had a high percentage of out-migrating freshmen, the percent of recent graduates who left the state to enroll in school was higher than that of first-time freshmen as a whole (figure 2 and table 3).

The migration patterns of first-time freshmen have been relatively stable since 1992. Enrollment due to the in-migration of first-time freshmen fluctuated by 5 percentage points or more in only 5 states between any two of the three most recent points in time that residence and migration data have been collected (1992, 1994, and 1996) (table 4), while the percent of enrolled residents leaving a state changed by 5 percentage points or more in only 6 states between these three reference points (table 4).

In most states where relatively large changes have occurred either in the percent of enrollment due to in-migration or in the percent of enrolled first-time freshmen leaving the state, these changes occurred because of a pattern of increases or decreases over the three points in time. For example, the percent of enrollment due to in-migration in Idaho dropped from 32.5 percent in 1992 to 27.3 percent in 1994 to 24.5 percent in 1996. Similarly, the percent of enrolled first-time freshmen leaving South Dakota rose from 24.6 percent in 1992 to 24.8 percent in 1994 to 30.2 percent in 1996. Eighteen states had an increasingly higher percentage of enrollment due to in-migration over the period from 1992 to 1996. Included in this group are Arizona, Connecticut, Maine, Michigan, and Utah. Twenty-four states had an increasing percentage of first-time students leaving the state to attend college, including Connecticut, Maine, New Hampshire, North Dakota, and Rhode Island.

In the fall of 1996, almost 23 percent of all first-time freshmen and 26 percent of recent high school graduate first-time freshmen were enrolled in private degree-granting postsecondary education institutions in the nation. Almost 53 percent of all first-time freshmen and almost 58 percent of recent graduate first-time freshmen who migrated between states enrolled in private institutions (tables 10 and 11).

The percent of all first-time freshmen enrolled in private degree-granting higher education institutions ranged from over 40 percent in Connecticut, the District of Columbia, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont to less than 10 percent in Kansas, Mississippi, Nevada, New Mexico, Oklahoma, Washington and Wyoming. In all but 17 states, at least one-half of the individuals who left the state to attend college for the first time did so to attend a private institution. States with a large number of private degree-granting postsecondary institutions were the primary beneficiaries of this migration. In Massachusetts, for example, where 72.5 percent of the degree-granting postsecondary institutions are private, and private institutions make up 59 percent of total FTE enrollment in the state[4], 88 percent of the first-time freshmen who migrated into Massachusetts attended a private institution (table 10).

First-time students were also more likely to go out of state to attend 4-year rather than 2-year institutions. Overall, in the fall of 1996, almost 54 percent of first-time freshmen were enrolled in 4-year institutions (table 14). However, only 47.9 percent remained in state to attend 4-year schools, whereas 82.9 percent of those migrating out of state did so to attend 4-year schools (table 14). Among first-time freshmen who were recent high school graduates, over two-thirds were enrolled in 4-year degree-granting postsecondary institutions. Sixty-two percent remained in their home state to attend 4-year colleges, but 91 percent of those who left their home state, left to attend 4-year schools (table 15).

Acknowledgements

The authors appreciate the reviewers of this report: Jacqueline E. King, American Council on Education; Michael Cohen, Claire Geddes, Lee Hoffman, and Marilyn McMillen, National Center for Education Statistics. The authors also appreciate the technical assistance provided by Martha Hollins.

Creation of the final database used to generate the tables in this report was accomplished through an interagency agreement with the U.S. Department of Commerce, Bureau of the Census. Sandra Reading of the Economic Surveys Division of the Census, along with other members of the Census staff, and a network of state coordinators shared responsibility for data collection and processing, nonresponse followup, and resolution of data inconsistencies. While their names are too numerous to mention here, their time, effort, and commitment toward making this an accurate database are gratefully acknowledged.

The authors of this report are indebted to all individuals who completed the survey forms and thus provided the information that made this report possible.

Appendix A - Technical Notes
Description of Survey

The Fall Enrollment (EF) survey is conducted annually as part of the National Center for Education Statistics' Integrated Postsecondary Education Data System (IPEDS).[5] The "EF" survey collects data on the number of students enrolled in postsecondary institutions in the United States and its outlying areas.[6] Most institutions on this file are eligible to participate in Title IV programs (financial aid). The final 1996 enrollment file includes data for 6,840 institutions in the 50 states, the District of Columbia, and the outlying areas.

Enrollment data were requested from 7,024 postsecondary institutions offering academic, vocational, and continuing professional education programs in 1996. The level of detail requested on each survey form depended on the highest level of offering of the institution and its higher education status in the previous academic year.[7] For example:

Form Type	Level of Institution	Data Requested:
EF1	4-year higher education institutions and all other schools offering a baccalaureate or higher degree	Attendance Status (full- or part-time) Student Level (undergraduate, first-professional, graduate) Race/ethnicity and sex of student Degree-seeking status Major field of study (even numbered years only) Year of study Age of student (odd numbered years only) Residence of first-time students (even numbered years only)
EF2	Less-than-4-year higher education institutions	Attendance Status (full- or part-time) Race/ethnicity and sex of student Degree-seeking status Year of study Age of student (odd numbered years only) Residence of first-time students (even numbered years only)
CN	All other schools	Attendance Status (full- or part-time) Race/ethnicity and sex of student Year of study

[5]Other IPEDS surveys include Institutional Characteristics, Completions, Fall Enrollment in Occupationally Specific Programs, Finance, Salaries, Fall Staff, Academic Libraries, and the Consolidated survey.

[6]Postsecondary education is defined as the provision of a formal instructional program whose curriculum is designed primarily for students who are beyond the compulsory age for high school. This includes programs whose purpose is academic, vocational, and continuing professional education, and excludes avocation and adult basic education programs.

[7]Higher education institutions are those that were accredited at the collegiate level by an agency recognized by the Secretary, U.S. Department of Education as of academic year 1995-96.

NCES conducts the Enrollment survey and all other IPEDS surveys in order to fulfill its legislative mission "to collect, and analyze, and disseminate statistics and other data related to education in the United States..." (20 U.S.C. 1221e-1, General Education Provisions Act, Sec. 406(b), as amended).

Survey Methodology

Overview

1996 fall enrollment data collected by the National Center for Education Statistics that are included on the public use data file represent 6,840 postsecondary institutions, of which, 6,535 are eligible to participate in Title IV programs (financial aid) in the United States and its outlying areas. There were 305 institutions that had self-reported eligibility and were found to be ineligible based on the Office of Postsecondary Education's PEPS file of March 1997. The 1996 Fall Enrollment survey was sent to the universe of institutions that were accredited at the collegiate level as of the 1995-96 academic year and to all other eligible institutions offering a bachelor's, master's, doctor's or first-professional degree. Enrollment data were collected from the institutions not receiving the Fall Enrollment survey via the Consolidated survey[8]. The Consolidated survey was sent to all remaining 4-year, 2-but-less-than-4-year, and less-than 2-year institutions eligible for Title IV funding. The enrollment data collected via the Consolidated survey were merged into the Fall Enrollment survey data.

Students **included** in the Fall Enrollment survey:

- students enrolled in courses creditable toward a degree or other formal award;
- students enrolled in courses that are part of a vocational or occupational program, including those enrolled in off-campus centers; and
- high school students taking regular college courses for credit.

Students **excluded** from the Fall Enrollment survey:

- students enrolled exclusively in courses not creditable toward a formal award and who are not in a postsecondary vocational program;
- students enrolled exclusively in remedial courses;
- students exclusively auditing classes;
- students studying abroad (e.g., at a foreign university) if their enrollment at the institution is only an administrative record and the fee is only nominal;
- students in any branch campus located in a foreign country; and

[8] The Consolidated survey is designed to collect information from non-collegiate institutions on fall enrollment, finance, fall staff, completions, and occupationally specific enrollment.

- students earning continuing education units (CEU's) only.

Universe, Institutions Surveyed and Response Rates

A major subset of all postsecondary institutions are those institutions that are eligible to participate in Title IV aid. It is this group of institutions that annually receive a fall enrollment survey. In past IPEDS surveys, eligible institutions were self-identified and included those institutions accredited at the college level by an agency or association recognized by the Secretary, U.S. Department of Education. Any other postsecondary institution that has at least one program of 300 or more clock hours (or 8 credits) and was established for at least 2 years was also included in the subset of eligible institutions. The latter group was based on self-reported responses to items on the Institutional Characteristics survey.

Beginning in 1996, the subset of eligible institutions was validated by matching the IPEDS universe with the Postsecondary Education Participation System (PEPS) file which contains the "true" eligibility status of postsecondary institutions. This file is maintained by the Office of Postsecondary Education (OPE). OPE grants eligibility to institutions to participate in Title IV federal financial programs. Using the PEPS file as the source for determining eligibility, 7,024 institutions were mailed Fall Enrollment Survey forms.

Fall Enrollment survey forms were mailed in July 1996: (1) EF1 forms were mailed to 2,385 institutions; (2) EF2 forms to 1,523 institutions; and (3) CN forms to 3,116 institutions. The survey results were collected from November 1996 through June 1997. During this time period a total of 184 institutions determined to be out-of-scope were deleted from the universe. These deletions resulted from formal notification by IPEDS state coordinators, the Department of Education eligibility notices, and from follow-up telephone calls. Included in the deletions were: (1) duplicates of other institutions on the file; (2) institutions that closed or had merged with another institution, and thus were no longer a legitimate institution or branch; (3) institutions that no longer offered postsecondary programs; or (4) schools that did not to conform to the IPEDS definition of an institution or branch. At the conclusion of this process, 6,840 institutions represented the final 1996 fall enrollment universe. The final universe was also adjusted to reflect institutions that changed from one sector to another subsequent to survey mailout.

Table A1 shows the number of institutions that were mailed the 1996 Fall Enrollment survey (or the Consolidated form) by level and control of institution; the final in-scope universe of institutions receiving either survey form; the number of in-scope institutions that responded; and the response rates.

Table A1.—Number of institutions in the 1996 Fall Enrollment survey and survey response rates by survey form and sector of institution

Survey form and sector of institution	Mailed	Final universe	Number Responded	Response rate
All postsecondary	7,024	6,840	6,495	95.0
EF1 form	2,385	2,383	2,275	95.5
EF2 form	1,523	1,484	1,423	95.9
Consolidated form	3,116	2,973	2,797	94.1
4-year	2,427	2,435	2,323	95.4
Public	630	631	624	98.9
Nonprofit	1,656	1,654	1,562	94.4
For-profit	141	150	137	91.3
2-year	2,248	2,481	2,391	96.4
Public	1,242	1,244	1,223	98.3
Nonprofit	425	403	381	94.5
For-profit	581	834	787	94.4
Less-than-2-year	2,349	1,924	1,781	92.6
Public	225	201	197	98.0
Nonprofit	99	88	86	97.7
For-profit	2,025	1,635	1,498	91.6

Table notes:

1. By definition, 4-year institutions offer a bachelor's degree or postbaccalaureate award of some kind; 2-year institutions offer at least one program of at least 2 years' duration; and less-than-2-year schools offer only programs of less-than-2-years duration. Other postsecondary institutions are those accredited at the occupational/vocational level (not at the college level as higher education institutions).

2. The sector of an institution at the time of mailout may differ from its sector in the final universe because a school's sector may change due to a shift in the highest level of offering, or due to improper classification by sector the prior year. Because of this sector change some 4-year institutions may return an EF2 form and some 2-year institutions may return an EF1 form.

3. Response rates were calculated as the ratio of the number of completed survey forms divided by the number of schools in the final universe. Any institution was considered a respondent if it supplied total enrollment by sex.

In establishing the PEPS file, the Education Department discontinued its tradition of distinguishing between institutions that are accredited at the college level from other postsecondary institutions. Therefore, it is not possible for NCES to maintain an updated subset of accredited institutions at the college level, also known as higher education institutions.

On the 1996 and subsequent IPEDS files, institutions are identified as (1) degree-granting - those that offer either an associate's, bachelor's, master's, doctor's, or first-professional degree; and (2) non-degree-granting (certificate only) - those institutions that offer only certificates at any level. Institutions offering only postbaccalaureate, postmasters, or first-professionals certificates and institutions offering certificates of less-than-4-years are included in this group.

Table A2 provides the number of institutions and survey response rates by eligibility status and degree-granting status by control and level of institution. The eligibility status of an institution was updated in March of 1997 and 305 institutions that were sent a fall enrollment survey lost eligibility status. On the final file, there are 6,535 eligible institutions. Of these 4,034 are degree-granting. It is this group of institutions that IPEDS will consider as higher education institutions in subsequent data collection activities.

Table A3 provides the total enrollment of institutions by eligibility and degree-granting status, by their 1995 higher education classification for all institutions in the 50 states, District of Columbia, and the outlying areas. In 1996 there were 14,550,056 students enrolled in eligible degree-granting institutions, which is about a 0.5 percent increase over the 14,481,915 students enrolled in higher education institutions. Enrollment in higher education institutions includes 14,393,518 students enrolled in eligible degree-granting institutions; 25,065 students in eligible non-degree granting institutions; 22,448 students in non-eligible degree-granting institutions; and 40,884 students enrolled in institutions that are not eligible and are non-degree granting.

Table A2.—Number and survey response rates of postsecondary institutions, by Title IV eligibility, and by degree-granting status and sector of institution: 50 states, District of Columbia and the outlying areas, Fall 1996

Survey Conduct and Editing

The Fall Enrollment survey carries a due date of November 15. Survey forms were collected via paper or transmitted to NCES via the Internet. Some institutions did submit data on diskette. Data for nonresponding CN institutions were collected by the Postsecondary Education Telephone System (PETS). All data, whether received on paper forms, diskettes, electronically via the Internet, or through the PETS system, went through the same editing process.) Extensive follow-up for survey nonresponse was conducted from November 1996 through April 1997. Initially, reminder letters were mailed, encouraging nonresponding institutions to complete and return their forms; and subsequently, PETS was used to collect only critical data by telephone from an institutional representative.

Survey responses were edited for internal and inter-year consistency. The following editing procedures were used:

Part A: Enrollment by race/ethnicity

(1) Addition checks were performed by adding down the columns and comparing generated totals with reported totals. If the reported total differed from the generated total but was within a designated range, the reported total was replaced by the generated total and the cell was flagged with the proper impute code. If the difference exceeded the designated range, institutions were contacted for verification/correction. Addition checks were also performed by generating totals for men and women across columns in each line of data submitted on the form. These generated totals by sex were compared to the reported totals. If the reported totals differed from the generated totals, but were within a designated range a balance field was created containing the difference by sex and placed on the data file. Reported detail and totals were not altered. If the difference exceeded the designated range, institutions were contacted for correction.

(2) Comparisons were also made with the number of students reported for selected items for the prior year. If the differences were sufficiently large to trigger an edit flag, institutions were contacted for verification.

Part C: Enrollment of first-freshman by residence

(3) Part C data were edited in a similar manner. Addition checks were performed and compared to reported totals in part C and to corresponding totals in Part A. Balances were generated when part A and part C totals differed. If the balance was outside a certain range the institutions were contacted for verification/correction. If the balance was within a certain range the Part C total was replaced by corresponding value in Part A. The balance was then allocated among the state of residence categories using the state of residence distribution actually reported by the institution.

Data Management and Imputation

Data for part A enrollment by race-ethnicity were imputed for nonresponding institutions. The following imputation procedures were used:

> For institutions with reported data on the prior year 1995 enrollment file: All institutions that reported data in both 1995 and 1996 were grouped by level of offering and control of institution. Enrollment data were then aggregated for each group and percent changes were calculated. Then for each nonresponding institution in 1996 the 1995 enrollment data were adjusted by the percent change of the group to which that institution belonged.
>
> Imputations for all items for institutions with no prior year report were based on current year group means or ratios derived for similar institutions with reported data in 1996. Groups were formed by combining institutions by level of offering and control of institution.

Data for part C enrollment of first-time freshman by state of residence were imputed for nonresponding institutions; The following imputation procedures were used:

> For institutions that reported data for first-time freshman in part A, but did not report residence data in part C in 1996, and reported residence data in 1994, the reported first-time freshman in Part A was distributed in the same proportion as the reported 1994 data by state of residence.
>
> For institutions that did not respond to any part of the 1996 fall enrollment survey but did respond to the 1995 fall enrollment survey the total first-time freshman in part A were imputed as described above. If the institution had reported residence and migration data in 1994 then the imputed first-time freshman in part A was distributed in the same proportion as the reported 1994 data by state of residence.
>
> Imputation was not done if the institution did not report residence and migration data in 1994. For these institutions the imputed or reported value of first-time freshman from part A was set equal to line 99 of part C and a balance line (98) which is also equal to line 99 was created. This was done to make grand total in part C consistent with part A and detail of part C consistent with the grand total of part C for both EF1 and EF2 records. Part C was not on the CN form.

For institutions, that responded to (column 1) all first-time freshman, but did not respond to (column 2) first-time freshman that graduated from high school in the past 12 months, the following partial imputation procedure was used:

> For all institutions that responded to both columns 1 and 2 a ratio was computed by dividing all first-time freshman graduation from high school in the past 12 months by all first-time freshman at the institution. A median ratio was the calculated by sector and

BEST COPY AVAILABLE

state of institution. All for-profit institutions were combined into one sector. For each institution that did not respond to column 2, the total first-time freshman count reported in column 1 by state of residence was multiplied by the median ratio of the institution's sector and state to impute first-time freshman who graduated high school in the past 12 months by state of residence.

Table A4 compares the number of institutions with first-time freshman and the total enrollment of all first-time freshmen for parts A and C. Some 3,090 degree-granting institutions reported first-time freshman in part A. Of those institutions, 3,070 reported enrollment by state of residence. Of the 20 that did not report, 15 were imputed using the methods described above and 5 were not imputed.

Table A4.— Number of institutions and enrollment of all first-time freshmen for parts A and C of degree-granting institutions, by survey form and response status: Fall 1996 1/

Survey form and Response status	Part A Total	Part C			Total in Part A but not in Part C
		Total	Reported	Imputed	
Number of institutions	3,526	3,155	3,070	85	371
CN form total	345	0	0	0	345
EF form total	3,181	3,155	3,070	85	26
EF form reported	3,090	3,085	3,070	15	5
EF form imputed	91	70	0	70	21
Total enrollment	2,311,631	2,223,764	2,187,447	36,317	87,867
CN form total	76,676	0	0	0	0
EF form total	2,234,955	2,223,764	2,187,447	36,317	11,191
EF form reported	2,205,106	2,203,383	2,187,447	15,936	1,723
EF form imputed	29,849	20,381	0	20,381	9,468

Table notes

1. Includes all 4-year degree-granting institutions and 2-year degree-granting institutions that were classified as higher education institutions in academic year 1995-96.

2. The 3,526 degree-granting institutions with first-time freshmen are a subset of the IPEDS universe. Institutions not included in this subset are freestanding first-professional institutions (e.g. law and medical institutions) and institutions with upper division students only.

3. Part C total = part C reported + part C imputed. Part A and not in part C = part A total – Part C total.

Table A5 compares the enrollment of all first-time freshmen for parts A and C in degree-granting institutions for each state and the outlying areas.

Table A5.— Reported and imputed first-time freshmen enrolled in degree-granting institutions, by survey form and part, and by state: Fall 1996 1/

State	Part A			Part C			Part A, EF minus Part C, total

1/ Includes all eligible 4-year degree-granting institutions and eligible 2-year degree-granting institutions that were classified as higher education institutions in academic year 1995-96.

NOTE: The number of first-time freshmen enrolled as derived from the residence and migration data (part C) was 87,867 less than the number derived from part A of the 1996 fall enrollment survey. Data missing from part C were not imputed if the institution did not respond to the residence and migration survey in fall 1994. Missing data accounted for 11,191 students. Part A enrollment counts also include 76,676 first-time freshmen in institutions that responded to the CN form, which does not have a residence and migration section.
